CLEANING GUIDE

CLEANING GUIDE

RICHCO ARTIFICIAL TURF

To maintain an optimal performance of Richco Artificial Grass Installations, establishing an appropriate cleaning regime is crucial. Richco recommends a daily cleaning in these high trafficked areas.

SCRUBBER / DRYER MACHINE METHOD OF CLEANING

1. Sweep (or use a flexible non-metal rake) to pick up th large pieces of debris.
2. Vacuum (like you would on carpet) to pick up surface soil.
3. Brushing with a stiff-bristled broom against the pile direction of the grass to try to stand it upright as best as possible.

MANUAL METHOD OF CLEANING

1. Use specialist synthetic grass cleaner-diluted as per manufacturer's instructions.
2. Apply solution to affected areas for cleaning.
3. After letting it soak for several minutes, scrub the turf gently in a circular motion with a turf-safe brush.
4. Once the dirt or staining is removed, rinse the areas thoroughly.
5. Allow it to dry.

Disclaimer: Richco will not be held responsible for the incorrect cleaning procedures resulting in damage to the artificial grass & the non-slip performance of the surface.

SPOT CLEANING/ SPILLAGES	It is important that spillages are immediately cleaned from the surface as follows: 1. Wipe up spillage with towels or paper towels and dispose of properly. It is important to not allow spillages to sit on the floor surface for too long. 2. Vacuum / Wet Vacuum or Sweep the small area of floor that has the spillage or needs spot cleaning. 3. Do not use any harsh chemicals on your grass to remove sticky stuff - this could damage the plastic. Instead use dish washing liquid, half and half of white vinegar mixed with water or specialist synthetic grass cleaner (as per manufacturer's instructions).
CHEWING GUM REMOVAL *(THIS SHOULD BE BANNED FROM THE PARKS)*	It is important that chewing gum is removed from Artificial Turf as follows: 1. Utilize a chewing gum removal freezing agent, to solidify the chewing gum (use protective PPE and use as per manufacture's instructions) and ensure that the gum has completely hardened. 2. Use a plastic scraper to carefully remove it from the surface. Be gentle when scrapping to avoid causing damage to the artificial grass. 3. You may need to reapply the freezing agent if the gum starts to soften. 4. If necessary to spot clean the area (as per above instructions). *DO NOT use a zero-point power washing to remove chewing gum – this will result in damages to our flooring systems*
CLEANING CHEMICALS	Richco recommends the use of a specialist synthetic grass cleaner (diluted as per manufacturer's instructions). For spot cleaning the use of dish washing liquid, half and half of white vinegar mixed with water can be used. Harsh detergents and bleach are not recommended as it will cause damage to the synthetic grass.
